Webex/Teams

Will the team members be required to sign non-disclosure agreements?

Yes

Project topic/title:

FX Carry Strategy

Background motivation of the project:

FX carry strategy involves borrowing in currency with low interest rate and investing in currency with high interest rate. By Exploring risk and return profile of FX carry strategies and understanding its persistent deviation from uncovered interest parity (UIP), this project can provide valuable insights into currency risk premia, market inefficiency and macroeconomic factors driving exchange rate.

Skills required:

Python, FX basics

Project objectives or questions to be investigated:

Construct and evaluate FX carry portfolios using historical currency, interest rate and economic data and identify drivers of returns and assess risks associated with carry strategy.

Implementation Details:

1. Collecting historical time series of FX, interest rate, and economic data from Bloomberg.
2. Creating libraries to build portfolio, calculate return and risk.
3. Explore different strategies and assess performance under different market environment.

Additional Notes:

Bloomberg terminals will be used in this project, which will require at least 2 students on the team to be physically located in Chicago.

Students may add this project lab to their resume, including the company name and a general description of their research (abiding by any applicable NDA) using the following format:
